Research in the Mount Rushmore State

University of South Dakota (USD), Vermillion, SD

National Institutes of Health (NIH)-funded USD researchers are exploring the potential therapeutic use of ubiquitin, a protein that destroys other proteins, to increase nerve cell recovery following a stroke.

Galera Therapeutics, Watertown, SD

Galera Therapeutics is conducting phase II clinical trials to test the safety and efficacy of a medication to prevent radiation-induced oral mucositis, a painful infection of the mouth. The medication would be administered prior to radiation therapy for patients suffering from head and neck cancers.

Sanford Research, Augustana College, Dana-Farber Cancer Institute, Brigham and Women's Hospital, and University of Pennsylvania Perelman School of Medicine, Sioux Falls, SD

Led by Sanford Research, this NIH-funded collaboration is studying the relationship between ovarian cancer and the protein SUSD2. Researchers have found that higher levels of SUSD2 are associated with improved survival rates, an exciting development in efforts to combat this deadly form of cancer.
