The Vaccines for Children Program provides free vaccinations for 16 diseases. It is estimated that the program, which serves children who otherwise would not have access to these vaccines, has prevented 322 million illnesses, 732,000 deaths, and saved a total of $1.4 trillion in societal costs.

**Opioid Epidemic**

Opioid-related drug overdoses claim the lives of 116 Americans every day. The CDC’s Prevention for States program aims to provide state health departments with resources to support interventions that prevent prescription drug overdoses. The CDC is taking a comprehensive approach that also focuses on ways to improve clinical practice guidelines for the prescription of opioids and approaches to optimize data quality and tracking that can aid states and clinicians in their efforts to end this crisis.

**Vaccines for Children**

The Vaccines for Children Program provides free vaccinations for 16 diseases. It is estimated that the program, which serves children who otherwise would not have access to these vaccines, has prevented 322 million illnesses, 732,000 deaths, and saved a total of $1.4 trillion in societal costs.

**National Asthma Control Program**

Asthma is a lifelong disease that affects 26 million Americans and carries a medical cost of over $50 billion nationwide. The National Asthma Control Program (NACP) established a national public health response to control asthma, working to improve surveillance systems and asthma management in schools, among other goals. Since its inception in 1999, the NACP has decreased asthma-related costs by $23.1 billion, leading to a return on investment of an estimated $71 for every dollar spent.
CDC Responds to Outbreaks Worldwide

The CDC is fighting contagious diseases 24/7. Here are some examples of outbreaks to which the CDC has responded in the past 16 years:

- Anthrax bioterrorism response in the U.S.
- Hurricane Katrina support
- Multi-state mumps outbreak
- Cholera outbreak in Haiti
- Global SARS outbreak
- Multi-state outbreak of listeriosis
- Swine Flu outbreak
- Supported MERS-CoV response in Saudi Arabia
- Fungal Meningitis outbreak in U.S.
- Ebola outbreak in West Africa
- International Zika virus outbreak

In an increasingly interconnected world where diseases know no borders, the CDC plays a vital role as the nation’s first line of defense.

Strong Majority say Funding for the CDC Should Increase

The Centers for Disease Control and Prevention (CDC) works to protect America from health, safety and security threats, both foreign and in the U.S. How important is it to increase funding for the CDC?
