

Listen. People are talking...

about being a member of **Research!America**
and the return on investment

“When **Research!America** increases public and policymaker awareness of the health and economic benefits of medical research and builds a strong base of citizen support for more research and innovation, we all win. Not one of us can do this alone.”

Lindsay Groff, MBA, executive director, Barth Syndrome Foundation

“In working to increase awareness of the benefits of research and innovation, **Research!America** directly supports our mission to develop innovative therapies to treat rare and specialty conditions. It is critical that our elected leaders at the state and national levels understand the importance and value of R&D, both from a patient and economic perspective. **Research!America** has an important and trusted voice that helps move these conversations forward.”

Phil Vickers, Ph.D., senior vice president and head of research and development, Shire

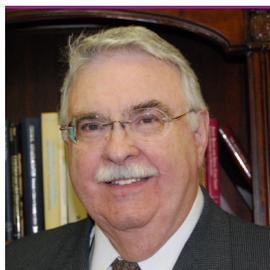

“Research benefits us every day, on many levels, from the computers in our pockets to the advances in health care and medicine that keep us healthy. But most people don’t make this connection, and don’t understand the role of research in both keeping America competitive and keeping us alive and well. **Research!America** bridges this gap, informing leaders, policymakers and the public of the critical role of research and the necessity to ensure its funding and growth.”

M. Roy Wilson, M.D., M.S., president, Wayne State University

“The advocacy efforts of **Research!America** help to complement **ASN**’s own efforts to advance nutrition research and to promote research policies that lead to scientific progress and innovation, ultimately improving public health.”

Sarah Ohlhorst, M.S., RD, senior director of advocacy and science policy, American Society for Nutrition

“The mission of **Research!America** to advocate for making research to improve health a national priority fits perfectly with our university’s mission. **Research!America** has made many important contributions to maintain the interest and visibility of medical and health care-related research at high levels nationally. The information distributed by **Research!America** in the form of publications, polling data, and advocacy alerts...allows us to follow-up on policy decisions of our government and to support information provided to the public sector concerning biomedical and health research.”

Richard Traystman, Ph.D., distinguished university professor and vice chancellor for research, University of Colorado Anschutz Medical Campus
