The Hon. Patrick Leahy  
Chairman  
Senate Committee on Appropriations  
Room S-146A, The Capitol  
Washington, DC 20510

The Hon. Richard Shelby  
Vice Chairman  
Senate Committee on Appropriations  
S-128, The Capitol  
Washington, DC 20510

The Hon. Rosa DeLauro  
Chair  
House Committee on Appropriations  
H-307, The Capitol  
Washington, DC 20515

The Hon. Kay Granger  
Ranking Member  
House Committee on Appropriations  
1036 Longworth HOB  
Washington, DC 20515

Dear Chair Leahy, Chair DeLauro, Vice Chairman Shelby and Ranking Member Granger:

Thank you for your commitment to ensuring that basic scientific and technological research, pandemic preparedness and COVID-response efforts were well provided for in the FY22 omnibus appropriations bill.

The Appropriations Committees in both the House and the Senate have led the way throughout the pandemic in ensuring that vital resources were made available in flexible and creative ways to allow decision makers to adapt to fast changing conditions around the world.

As you begin the FY23 appropriations process, we urge you to sustain your commitment to federal funding for medical and public health research by securing a robust 302(b) funding allocation for the Labor-HHS-Education Subcommittee to meet the very real research funding needs before us. A healthy 302(b) allocation will help ensure robust funding for important health funding in the Labor-HHS-Education Subcommittee for NIH, CDC, AHRQ, BARDA and ARPA-H.

We are particularly concerned about funding for the National Institutes of Health. We are deeply disappointed in the minimal (0.6% percent) increase recommended in the President's FY23 budget submission. As our nation's flagship research institution, we believe that an infusion of at least \$4.1 billion is more than justified by the toll health threats take on Americans and populations across the globe. An increase of \$4.1 billion, inclusive of 21<sup>st</sup> Century Cures funding, would empower NIH to grow the number of progress-fueling grants the Institutes can support. The American people need and value fast-paced medical progress, which cannot be accomplished without fueling the barrier-breaking foundational research NIH funds and conducts. The anemic funding increase for NIH included in the President's budget will not put us in a position to confront and defeat longstanding, emerging, and yet unknown health threats or bolster our research capacity to ensure global competitiveness.

While we support ARPA-H, we feel strongly that funding for this new agency should complement – not supplant – NIH funding. The importance of providing robust funding to NIH and simultaneously supplying sufficient funding for this innovative new agency underscores the need for a robust 302(b) allocation for the Labor-HHS-Education Subcommittee.

Thank you for your time and consideration as you prepare for FY23 appropriations to fund our national priorities. Please call on us if we can be of assistance to you.

Sincerely,
