AMERICA Speaks!
POLL DATA SUMMARY VOL. 22
Research!America’s latest Poll Data Summary constitutes an important snapshot of public priorities as they concern science as well as medical and health research. This summary offers important opportunities for channeling public support for increased research and public health investments to drive delivery of solutions that our nation, and the world, desperately need.

Research!America has been commissioning public opinion surveys for over three decades, keeping a pulse on public attitudes as we strive to assure our advocacy is responsive to the hopes and aspirations of Americans, even as we address their concerns about research. As President Lincoln memorably noted, “Public sentiment is everything. With public sentiment, nothing can fail; without it nothing can succeed.”

This 22nd edition of our Poll Data Summary, made possible with the generous support of the American Medical Association, shows strong agreement among members of the public concerning the value placed on science and innovation. There is strong bipartisan agreement that the federal government should support basic research advancing the frontiers of knowledge (83%) and provide incentives for private sector investment in science and technology (79%).

The data also strongly underscores that the public wants to hear from the science community – seeing communication as part of the job of scientists, many of whom work for the public. Americans also want scientists and public health officials to speak to elected officials, and they expect those officials to listen. At the same time, we’ve also seen notable slides in the confidence the general public has in public health officials, and in the percentage of adults who see the work of scientists benefitting them.

Despite the slide in confidence in scientists and public health officials, 7 in 10 Americans still agree (similar to last year) COVID-19 is a disruptive event calling for assigning a higher priority to science and technology in the U.S. (This result comes at a time when federal investment in science and technology has fallen to less than half the share of gross domestic product it once was – a situation that threatens our economic and national security.)

We hope that you will share this summary with your network and other interested parties. Research!America will continue to work with our members to make these public opinion perspectives broadly known; to make public engagement highly valued by the science community; and to work together with all stakeholders to raise the volume of advocacy for science with elected officials.
The American Medical Association (AMA) is pleased to join Research!America in offering a wealth of insights found in Volume 22 of the Poll Data Summary in the America Speaks series.

The latest findings offer areas of encouragement as well as issues of concern. For example, while most of those surveyed continue to place their faith in scientists and public health officials, the percentage of those who believe scientists are working in the public’s best interest dropped from 80% in January 2021 to 68% a year later. And while a partisan gap remains in place between Democrats and Republicans when asked about the amount of trust they place in scientists and in public health officials, the latest survey documents broad bipartisan support for ensuring that scientists share research results with elected officials and outline the potential impact of their findings.

Americans across the political spectrum also agree that federal support for scientific and technological research should continue given the vital role it plays in economic growth and job creation. And while respondents pointed to the COVID-19 pandemic as the greatest challenge facing the nation, the survey also uncovered growing concerns over mental health and inadequate funding for mental health research.

The AMA appreciates the opportunity to partner with Research!America to provide advocacy, leadership, and outreach that supports expanded medical and scientific research, and promotes the betterment of public health. Our core mission of proactive advocacy aligns perfectly with Research!America’s drive to build support for greater research into the cure, treatment, and prevention of physical diseases and mental disorders.

The AMA is proud to be a founding member of Research!America, and to stand with its diverse membership of institutions, professional societies, and businesses, in helping improve the health of the nation.

**SURVEY HIGHLIGHTS:**

- Eight in 10 Americans say investing in research is important to economic growth and creating jobs and that investments in science and technology are creating employment opportunities in the United States.

- Mental health is now a top-3 health concern (behind COVID-19 and cost of health care); 11% identified mental health as the most important health concern, up from 6% in 2021.

- Confidence in scientists acting in the public’s best interest decreased 12 points from 80% to 68% and those who say the work of scientists benefits them decreased 10 points from 83% to 73%. Confidence in public health officials slipped 16 points from 78% to 62%.

- Americans voiced strong bipartisan agreement that a scientist’s job should include communicating their research to the public (85% of Democrats, 84% of Republicans, and 71% of independents say “yes”).

- The survey showed strong bipartisan support for federal incentives to promote private sector investment in science and technology; 9 in 10 Democrats, 7 in 10 Republicans and independents say it is important.

- Americans agree it is important for the United States to be a global leader in science and technology (89%) and health research (85%).

**MESSAGE FROM THE AMERICAN MEDICAL ASSOCIATION**

James L. Madara, MD
CEO, American Medical Association

The American Medical Association (AMA) is pleased to join Research!America in offering a wealth of insights found in Volume 22 of the Poll Data Summary in the America Speaks series.

The latest findings offer areas of encouragement as well as issues of concern. For example, while most of those surveyed continue to place their faith in scientists and public health officials, the percentage of those who believe scientists are working in the public’s best interest dropped from 80% in January 2021 to 68% a year later.

The AMA appreciates the opportunity to partner with Research!America to provide advocacy, leadership, and outreach that supports expanded medical and scientific research, and promotes the betterment of public health. Our core mission of proactive advocacy aligns perfectly with Research!America’s drive to build support for greater research into the cure, treatment, and prevention of physical diseases and mental disorders.

The AMA is proud to be a founding member of Research!America, and to stand with its diverse membership of institutions, professional societies, and businesses, in helping improve the health of the nation.
“Americans are seeing what matters. It matters that we lead with science and invest in research...We have a chance to alleviate so much pain and bring hope to so many people; to put an end to cancer, Alzheimer’s, diabetes and so many other diseases.”

— President Joseph R. Biden at the 2021 Research!America Advocacy Awards
TOP CONCERNS
COVID-19 PANDEMIC REMAINS THE TOP CONCERN

In your opinion, which of the following are the most serious issues facing this country?

- COVID-19: 52%
- Economy: 38%
- Inflation: 33%
- Health Care: 30%
- Climate Change: 27%
- Crime: 26%
- Political Conflict: 23%
- National Security: 20%
- Jobs: 17%
- Education: 11%
- Federal Deficit: 10%
- Opioid Crisis: 9%
- Other (Specify): 5%

COVID-19 IS A DISRUPTIVE EVENT; U.S. SHOULD PRIORITIZE SCIENCE AND TECHNOLOGY

Which statement is closest to your view?

- **Statement A**: The COVID-19 pandemic is a disruptive event and requires that the United States assign a higher priority to science and technology.
- **Statement B**: Things will get back to normal soon; we don't need increased efforts in science.

Source: A Research!America survey of U.S. adults conducted in partnership with Zogby Analytics in January 2022.

“Science is the U.S. government's best ally. Renewed investment, coupled with proactive efforts to innovate new solutions, can empower our nation to overcome threats to Americans and people across the globe.”

— Science and Technology Action Committee

% saying "very important" or "somewhat important"

Source: A Research!America survey of U.S. adults conducted in partnership with Zogby Analytics in January 2022.
Some governments have a goal to increase their science and technology spending to reach 3%-5% of their respective economies annually. Some, including Japan and Korea, have already met this goal, and others, including China, have pledged to do so. How important do you think it is for the United States to achieve this goal?

- Very important: 49%
- Somewhat important: 34%
- Not very important: 7%
- Not at all important: 3%
- Not sure: 8%

Source: A Research!America survey of U.S. adults conducted in partnership with Zogby Analytics in January 2022.
8 IN 10 SAY SCIENCE AND TECHNOLOGY INVESTMENT CREATES U.S. JOBS

In general, do you think investments in science and technology are creating employment opportunities for all, most, some, or very few people in this country?

90% Say “All, most, or some”

80% Say “All, most, or some”

77% Say “All, most, or some”

Source: A Research!America survey of U.S. adults conducted in partnership with Zogby Analytics in January 2022.

“Research yields enormous benefits for our state, among them the attraction of talent, federal funding, and economic development.”
— M. Roy Wilson, MD, President, Wayne State University
HALF SAY SCIENCE AND TECHNOLOGY INVESTMENTS ARE CREATING JOBS FOR THEM OR PEOPLE THEY KNOW

In general, do you believe investments in science and technology are creating employment opportunities for you or people you know?

Source: A Research!America survey of U.S. adults conducted in partnership with Zogby Analytics in January 2022.

“Our research enterprise has long been a driver for innovations that have saved lives, inspired entire new industries, and spurred major economic growth... look no further than the rapid and unprecedented development of COVID-19 vaccines, enabled by recent breakthroughs from investing in basic research.”

— Marcia McNutt, PhD, President, National Academy of Sciences
How important is it for the federal government to support incentives for private sector investment in science and technology?

*STRONG SUPPORT FOR GOVERNMENT TO INCENTIVIZE PRIVATE SECTOR SCIENCE AND TECHNOLOGY INVESTMENT*

Source: A Research!America survey of U.S. adults conducted in partnership with Zogby Analytics in January 2022.
Do you agree or disagree with the following statement? Even if it brings no immediate benefits, basic scientific research that advances the frontiers of knowledge is necessary and should be supported by the federal government.

Source: A Research!America survey of U.S. adults conducted in partnership with Zogby Analytics in January 2022.

“It is no secret that doing big things in health care can take time, but for patients and families who are suffering, there is no time to waste. We need to make it clear that health care innovation and the development of cures and treatments is, and will continue to be, an urgent and nonpartisan priority.”

— The Honorable Fred Upton, U.S. Representative (R-MI)
As you may know, the federal government provides public funds on a competitive basis to universities to conduct basic scientific research. Do you approve or disapprove of the federal government spending to sponsor scientific research at universities?

Source: A Research!America survey of U.S. adults conducted in partnership with Zogby Analytics in January 2022.
**INCREASING SUPPORT FOR IMPROVING K-12 STEM EDUCATION**

Do you agree or disagree that the federal government should assign a higher priority to improving K-12 education focused on science, technology, engineering, and mathematics?

National MS Society
METHODOLOGY

- Online surveys are conducted with an approximate sample size of 1000+, adults (ages 18 and up) and a maximum theoretical sampling error of +/- 3.1%.

- Data are demographically representative of adult U.S. residents.

- Survey data in this publication was conducted by Zogby Analytics.

- Due to rounding, the total may not add to 100% on some charts.

Research!America began commissioning polls in 1992 in an effort to understand public attitudes toward medical, health, and scientific research. The results of Research!America’s polls have proven invaluable to our alliance of member organizations and, in turn, to the fulfillment of our mission to advocate for science, discovery, and innovation to achieve better health for all. In response to growing usage and demand, Research!America has expanded its portfolio, which includes state, national, and issue-specific polling.

Poll data is available by request or at www.researchamerica.org.
