AMERICA SPEAKS!

Survey data reflecting the views of Americans on medical, health, and scientific research
Public opinion surveys have been a critical tool in informing Research!America’s mission to advocate for science, discovery, and innovation to achieve better health for three decades. In this volume of America Speaks!, we continue to explore the views of Americans on medical, health, and scientific research.

Research!America was founded in 1989 during a challenging time for the science and medical research enterprise: a recession had put federal support for research funding at risk and too many policymakers appeared dismissive of the value of science. We began surveying the American public, believing then — as now — that effective science advocacy begins with understanding the public’s attitudes about medical and science-related topics.

In this critical election year, we continue to keep our finger on the pulse of public opinion, identifying widespread support across the political spectrum for prioritizing faster medical progress. We are living in an era in which trust is being undermined and misinformation is easily spread, creating confusion and questioning expertise. Yet, our survey results affirm that Americans rank scientists high in credibility and view research as a problem solver.

Other findings warrant optimism as well: There is widespread agreement across the political spectrum that spending to treat, prevent, and cure disease is not enough, and there is willingness by a majority of Americans to pay more in taxes if those dollars go to medical research. This willingness has increased two years in a row. Public support for basic research is strong and also has been trending upward. A large majority favor doubling federal spending on medical research over the next five years.

In surveys of two burgeoning scientific areas, Americans tell us genetic research is important to improve their family’s health and they agree more donated organs and tissues will help researchers make medical and health breakthroughs. There is also robust support for federal investment in research to improve healthcare quality and safety.

Americans are deeply concerned about public health threats such as opioid addiction, mental health, climate change, vaping, gun violence and antibiotic resistance. At the same time and of great concern, belief in the importance of vaccines, and confidence in vaccine safety, have decreased. Not surprisingly, cost of health care tops the list of the most important issues facing our nation. In tackling the cost problem, we must be mindful of policies which might inadvertently choke off the very innovation needed to stop diseases and the costs they generate.

Public sentiment is clear: federal investment in research — from basic, to more targeted, to public health and health care delivery — is not keeping pace with current opportunities nor the critical need to find treatments and improve people’s lives. Americans know research is a problem-solver. Equipped with this information, our role as advocates is to work with our members and partners to ensure that in this challenging election year, science is championed like never before.

Let us join forces to use this data to advance the goals and aspirations of the American people. As we write this, America is grappling with a coronavirus outbreak; the value of research and the place of scientific evidence in decision making could not be more obvious or more paramount. It’s an in-the-moment reminder we can’t let up advocacy for the research that will find the solutions to what ails us.
The American Medical Association (AMA) is pleased to join Research!America in releasing the 20th edition of the Poll Data Summary in the America Speaks! series. In placing our finger on the pulse of national public opinion in this election year, we were heartened to find widespread support for prioritizing health research to speed breakthroughs in treating, preventing, and curing disease.

This year’s findings inspire optimism for securing bipartisan solutions to many of our nation’s most pressing health problems, such as vaping and opioid use disorder. For example, for the second year in a row, the poll identified support that cuts across party lines for a tax increase to specifically benefit medical research. That willingness stems from broad-based agreement that current spending for this purpose is insufficient.

At the same time, a strong majority of poll respondents want our nation to advance its role as the global leader in medical and scientific research. Furthermore, support for basic research continues to grow stronger. This year’s Poll Data Summary also points toward greater awareness of the important role health research plays in advancing our quality of life.

It is gratifying that Americans firmly support organ and tissue donations from all walks of life and back genetics research as a pathway for more people to live longer, healthier lives.

As always, the AMA is grateful for the chance to partner with Research!America in providing advocacy, leadership, and outreach that supports medical and scientific research and promotes the betterment of public health.

Our core mission encompasses a broad range of proactive advocacy on all of the public health issues of our day. That mission is perfectly aligned with Research!America’s drive to build support for greater research into the cure, treatment, and prevention of physical diseases and mental disorders.

The AMA is proud to be a founding member of Research!America and to stand with its diverse membership of institutions, professional societies, and businesses, in helping improve the health of the nation.

**MESSAGE FROM THE AMERICAN MEDICAL ASSOCIATION**

James L. Madara, MD
CEO
AMA

**SURVEY HIGHLIGHTS:**

- In this election year, 88% say the President and Congress should assign a high priority to ensuring faster medical progress.
- 6 in 10 say current spending on medical and health research is not enough.
- More than two-thirds would be willing to pay a dollar more per week in taxes if they knew the money would support additional medical research.
- A strong majority — 85% — say it is very or somewhat important for scientists to inform elected officials about their research and its impact on society.
- 8 in 10 Americans strongly or somewhat agree that more research is needed on the impact of vaping on health.
“The health challenges the world faces today are more complex than ever: Alzheimer’s disease, mental health, obesity and diabetes, antibiotic resistance... If not addressed with a sense of urgency, these challenges will have a significant impact not only on this country, but the entire world.”

— Paul Stoffels, Chief Scientific Officer, Johnson & Johnson —
THE PULSE OF PUBLIC OPINION

**Strong Majority Support Faster Medical Progress as a Federal Priority**
How important is it for the President and Congress to assign a high priority to ensuring faster medical progress?

- 53% Very important

Top Health Issues Facing the Nation

What would you say is the single most important health issue facing the nation?

- Cost of health care: 21%
- Substance abuse/opioid abuse/drug abuse: 15%
- Mental health: 13% (Up 5% from 8% in 2019)
- Cancer: 9%
- Gun violence: 9%
- Don't know: 8%
- Diabetes: 7% (Up 5% from 2% in 2019)
- Obesity: 7%
- Suicide: 4%
- Heart disease: 3%
- Other: 2%
- HIV/AIDS: 2%
- Alzheimer’s disease: 2%

“We need to make everybody in Congress and in our communities understand that mental health is just as essential for your well-being as physical health.”

— Judy Chu, U.S. Representative (D-CA-27) —

HOPE FOR THE FUTURE: GENETICS RESEARCH

Americans Are Curious About Human Genetics Research

Please select from the following the top five words that best reflect your attitudes towards human genetics research:

CURIOS  59%
HOPEFUL  53%
AMAZED   42%
OPTIMISTIC 42%
CAUTIOUS  38%
OPEN  30%
EXCITED 28%
CONCERNED 24%
HESITANT 20%
ENGAGED 17%
POWERFUL 16%
SKEPTICAL 16%
WORRIED  10%
CONFUSED  8%
Pessimistic 7%

Americans Think Genetic Research is Important to Improving Family Health

Do you agree or disagree that genetic research is important to improving your family's health?

- 34% Strongly agree
- 43% Somewhat agree
- 8% Somewhat disagree
- 2% Strongly disagree
- 14% Not sure

Americans Support Federal Funding For Genetic Research

How important is it to increase federal funding to support genetic research?

- 35% Very important
- 39% Somewhat important
- 10% Not too important
- 5% Not at all important
- 12% Not sure

“It is an exciting time for human genetics and genomics, and emerging knowledge is speeding discovery and applications in research, medicine, and society. It’s [also] exciting how curious and hopeful Americans are about this fast-paced area of research.”

— Anthony Wynshaw-Boris, MD, PhD, President, American Society for Human Genetics ——

Source: A Research!America poll of U.S. adults conducted in partnership with American Society for Human Genetics and Zogby Analytics in December 2019
HOPE FOR THE FUTURE: ORGAN AND TISSUE DONATION

Most Americans Agree Organ/Tissue Donations Help Make Medical and Health Breakthroughs

Please indicate the extent to which you agree or disagree with the following statement: Donated organs and tissues help researchers make medical and health breakthroughs.

- 62% Strongly agree
- 30% Somewhat agree
- 3% Somewhat disagree
- 1% Strongly disagree
- 3% Not sure

Majority of Americans Are Familiar with Organ and Tissue Donation

Organs and tissues can be donated from a person who has died for use in a person who is alive. Prior to this survey, had you ever heard of organ and tissue donation?

- 91% Yes
- 7% No
- 2% Not sure

“The gifts of organ and tissue donations are selfless acts of generosity that provide opportunities to advance discovery, improve health, and save lives. Knowing that the public values this research and wants us to continue to do more of it means we have to tell more of our story.”

— Bill Leinweber, President and CEO of the National Disease Research Interchange (NDRI) —
Americans Support Organ/Tissue Donation for Research at Death

In general, do you support or oppose the donation of organs and tissue for research at death?

Source: A Research!America poll of U.S. adults conducted in partnership with National Disease Research Interchange (NDRI) and Zogby Analytics in January 2020

Americans Aware of Organ/Tissue Shortages and Agree the Public Should be Encouraged to Donate

Please indicate the extent to which you agree or disagree with the following statement: There are significant shortages of both organs and tissues for donation and for research and the public should be encouraged to become donors.

- 51% Strongly agree
- 30% Somewhat agree
- 9% Somewhat disagree
- 3% Strongly disagree
- 8% Not sure

59% Strongly support
25% Somewhat support
11% Neither support nor oppose
2% Somewhat oppose
2% Strongly oppose
2% Not sure
Large Majority of Iowans Want to Hear Presidential Candidates Discuss Science-Related Issues

Do you agree or disagree that the presidential candidates should participate in a debate to discuss key science-based challenges facing the United States, such as health care, climate change, energy, education, innovation and the economy?

- **52%** Strongly agree
- **35%** Somewhat agree
- **5%** Somewhat disagree
- **3%** Strongly disagree
- **5%** Not sure

Iowans Value U.S. Leadership In Science and Technology Research

How important is it to you that the U.S. be a world leader in science and technology research?

- **58%** Very important
- **32%** Somewhat important
- **3%** Not very important
- **2%** Not at all important
- **4%** Not sure

“Science policies related to our health, environment, economy, and national security impact every American, and these results suggest candidates ...should be prepared to develop and discuss their policies well before Election Day”

— Sheril Kirchenbaum, Executive Director, Science Debate —
Majority of Iowans More Likely to Vote for Pro-Science Candidate

Would you be more likely or less likely to vote for a candidate considered pro-science?

- 54% More likely
- 5% Less likely
- 18% Not relevant
- 23% Don't know

75% of Iowans Think Candidates Should Have a Science Advisor

How important is it that candidates for president have a science advisor?

- 35% Very important
- 40% Somewhat important
- 12% Not very important
- 4% Not at all important
- 9% Not sure

Source: A Research!America survey of Iowa adults conducted in partnership with Science Debate and Zogby Analytics in June 2019.
Research!America began commissioning polls in 1992 in an effort to understand public attitudes toward medical, health, and scientific research. The results of Research!America’s polls have proven invaluable to our alliance of member organizations and, in turn, to the fulfillment of our mission to advocate for science, discovery, and innovation to achieve better health for all. In response to growing usage and demand, Research!America has expanded its portfolio, which includes state, national, and issue-specific polling.

Poll data is available by request or at www.researchamerica.org.
