MESSAGE FROM
Leadership

Mary Woolley
President and CEO
Research!America

Sudip S. Parikh, PhD
Chair
CEO, American Association for the Advancement of Science; Executive Publisher, Science Family of Journals

Research!America’s latest Poll Data Summary presents an important snapshot of public priorities as they concern medical and health research as well as science and technology more broadly. Understanding public sentiment is vital to assuring that public investment and public policies reflect public priorities. This 24th edition of our Poll Data Summary, made possible with the generous support of the American Medical Association, shows strong public agreement concerning the value of our nation’s science and technology (S&T) enterprise and the need for investment. The majority of Americans – regardless of political party affiliation – support Congress investing more taxpayer dollars to advance science and technology in the U.S. (62%).

Our national findings strongly underscore that the public not only wants to invest more in S&T, it wants to hear from the science community, with 8 in 10 respondents regarding communication with the public as part of the job of scientists. Americans also want scientists and public health officials to speak to elected officials about the impacts of their research (90%).

Americans also tell us that the U.S. is experiencing a mental health crisis, and say it is important to increase funding for research in this area. Additional high-profile health concerns for Americans include opioid addiction, climate change, and antibiotic resistance, among other issues. Public sentiment is clear: research can deliver solutions, but increased investment in medical and scientific progress is needed to keep pace!

Our recent work commissioning surveys has benefitted from partnerships that allowed us to assess public sentiment in specific areas. Our survey in partnership with Virginia Tech highlighted state-level concerns; our survey in partnership with the Dana Foundation showed Americans’ views on brain health. We would love to partner with you as well – what issue or demographic would you like to understand better?

We hope you will share this summary with your network. Research!America will continue to work with our members to make public perspectives broadly known; to support public engagement by the science community; and to work together with all stakeholders to raise the volume of advocacy for science. We are strongest when we work together!
The work of Research!America to promote science and innovation through active engagement and advocacy complements the mission of the American Medical Association (AMA) to promote the art and science of medicine and the betterment of public health. For that and other reasons, the AMA is proud to be a founding member of Research!America, and to work closely with its leadership and members to secure funding and policies that advance medical, health and scientific research.

An important element of Research!America’s work involves understanding public support for this research, along with gauging public opinion on a wide range of regional, national and global issues related to public health and medical innovation. The insights gathered in America Speaks!: Poll Data Summary, Volume 24 provide a fresh look at the optimism but also areas of concern in health care today, while highlighting opportunities for improvement. These are invaluable insights as our health care system becomes more complex and technology-centered.

For example, respondents to the latest poll identified the cost of care as the single most important health issue facing the nation, representing a double-digit percentage increase over 2023. Mental health concerns ranked second. However, less than a third of respondents said that candidates for Congress respond well to health concerns of people like themselves, with older Americans assigning the poorest grades.

Poll results also found strong support for a more rapid pace of health care innovation, with 84 percent of respondents sharing that it was important for political candidates to promote faster medical progress. Nearly 7 in 10 said they were more likely to back a candidate for national office if that person favored greater federal spending on medical and health research, while a majority said they would willingly pay $1 more each week in taxes if they were certain it would be spent on such research.

The AMA is always eager to partner with Research!America to provide advocacy, leadership and outreach that supports expanded medical and scientific research. Our advocacy on behalf of physicians and their patients aligns with the aim of Research!America’s to provide clarity on how the public views our changing health care system so that we can better advance scientific discovery, innovation and improve health for all people.

On behalf of all of us at the AMA, we thank Research!America for its continued efforts to promote a health system worthy of this nation and its people.

8 IN 10 SAY IT’S IMPORTANT TO SET A HIGHER GOAL FOR R&D SPENDING

Some governments have a goal to spend 3%-5% of GDP on research and development. Some, including Japan and Korea, have already met this goal, and others, including China, have pledged to do so. The U.S. currently spends 0.7% of our GDP on research and development. How important is it for the U.S. to set a higher goal?

Young people aged 25-42 (75%) are less likely to say “very or somewhat important”.

84% of Republicans say “Very or somewhat important”.

91% of Democrats say “Very or somewhat important”.

80% of Independents say “Very or somewhat important”.

Source: A ResearchAmerica survey of U.S. adults conducted in partnership with Zogby Analytics in January 2024.
88% SUPPORT RESEARCH TO ADDRESS HEALTH DISPARITIES

Studies show that in addition to increased risk from COVID-19, some health problems such as cancer, diabetes, heart disease, and infant mortality happen more often among certain minorities or citizens with lower incomes. How important do you feel it is to conduct research to combat health disparities?

Source: A Research!America survey of U.S. adults conducted in partnership with Zogby Analytics in January 2024.
STRONG BIPARTISAN SUPPORT FOR INVESTMENT IN HEALTH CARE DELIVERY RESEARCH

A type of research called health care delivery research seeks to improve the translation of discoveries from research into medical practice. How important do you think it is for the United States to invest in health care delivery research?

Democracy

- 96% Say “Very or somewhat important”

Republicans

- 86% Say “Very or somewhat important”

Independents

NEARLY 7 IN 10 FEEL POSITIVELY ABOUT CLINICAL TRIALS

What is your perception of clinical trials?

- Very positive: 29%
- Somewhat positive: 28%
- Neutral: 39%
- Somewhat negative: 4%
- Not sure: 76%

Source: A Research!America survey of U.S. adults conducted in partnership with ACRO and Zogby Analytics in October 2023.
LACK OF TRUST AND INFORMATION ARE TOP REASONS PEOPLE DON’T PARTICIPATE IN CLINICAL TRIALS

Fewer than 10% of Americans participate in clinical trials. Which of the following do you think is a reason that individuals don't participate in clinical trials? (Check all that apply)

- Lack of trust
- Not aware/lack of information
- Adverse side effects
- Too risky
- Little or no monetary compensation
- Privacy issues
- Too much time
- Distance
- No health conditions to treat
- Other (Specify)
- Not sure

STATE FOCUS: MATERNAL MORTALITY CRISIS IN GEORGIA

6 IN 10 AGREE THAT MATERNAL MORTALITY IS A PROBLEM IN GEORGIA

To what extent do you agree that maternal mortality is a problem in the state of Georgia?

Urban respondents (63%) are more likely to agree that maternal mortality is a problem in Georgia.

African Americans (68%) are more likely to agree that maternal mortality is a problem in Georgia.

Source: A Research!America survey of adults in Georgia conducted in partnership with the Emory University and Zogby Analytics in October 2023.
57% of Georgians know someone who has experienced pregnancy complications.

Have you or someone you know (friend or family) experienced complications during pregnancy?

- Yes, myself: 7%
- Yes, someone I know: 19%
- No: 36%
- Not sure: 38%

What pregnancy complication(s) did you or they experience?

- Higher blood pressure during pregnancy (Preeclampsia): 55%
- Baby born early (Pre-term labor): 50%
- Excessive bleeding (Hemorrhaging): 26%
- Blood clots: 7%
- Obstruction of an artery by air bubble (Embolism): 6%
- Problems with heart muscle (Cardiomyopathy): 6%
- Severe infection: 6%
- Other: 13%
- Not sure: 7%

Cynthia Zagieboylo
President and CEO, National MS Society

Elias A. Zerhouni, MD
Professor Emeritus Radiology and Biomedical Engineering, Johns Hopkins University; Former Director, National Institutes of Health (2002-2008)
Research!America began commissioning polls in 1992 in an effort to understand public attitudes toward medical, health, and scientific research. The results of Research!America’s polls have proven invaluable to our alliance of member organizations and, in turn, to the fulfillment of our mission to advocate for science, discovery, and innovation to achieve better health for all. In response to growing usage and demand, Research!America has expanded its portfolio, which includes state, national, and issue-specific polling.

Poll data is available at www.researchamerica.org/surveys
